

BONE WAX

Product

SMI Bone Wax is indicated to control bleeding on bone surfaces. It acts as a mechanical barrier to stop bleeding, exerting a haemostatic function.

Composition

A mixture of whitened bee wax (80%) and isopropyl palmitate (20%). It is slightly yellowish and has a characteristic bee wax odour.

Features

- ✓ Easy to shape and apply "hand-warm"
- ✓ Remains in place and does not swell
- ✓ Ready to use out of package
- ✓ Offers controlled, precise application

Advantages

- ✓ Stops bleeding upon application
- ✓ Not soluble in corporal fluids
- ✓ Biochemically inert and biocompatible

Packaging

Supplied in sterile, individually wrapped sticks of 2.5 g (0.09 oz)
Packs of 12 pcs

Contraindication

Do not use where a rapid regeneration and bone melt is required.

Possible adverse effects

May include foreign body reaction with inflammatory tissue reaction or increased susceptibility to infection.
